

Magnetisers

Cable & Pipeline Magnetisation

Benefits

- Increases vertical tracking range by 500%
- Magnetic field lasts life of the cable
- Allows dead or alive cables to be tracked
- Increases tracking accuracy

Products that can be Magnetised

- Telecommunication Cables
- Power Cables
- Flexible Flowlines
- Steel Pipelines
- Stainless Steel Pipelines

Innovatum Magnetisers (Magnetic Field Enhancement Systems) have been developed to place specific magnetic fields onto submarine cable and pipeline in order to make them more visible to underwater tracking systems.

During the magnetisation process both the distance the cable has travelled and the magnetic field which has been impressed on it are logged by a computer. This provides a record for the client and importantly for surveyors who may subsequently need to survey the cables

The Magnetic fields are permanent and have no effect on power or data transmission, marine life or the environment.
