

SUBMAGNETIX

Inshore Survey Division

Services

- Submarine Cable Survey
- Submarine Pipeline Survey
- Magnetic Mapping Survey (UXO etc.)
- Data Processing
- Full Charting & Reporting

Vehicles

- 3 x SAAB Seaeye Falcon ROVs
- 2 x SAAB Seaeye Cougar Xt ROVs
- 1 x SAAB Seaeye Panther XTP ROV
- 2 x Innovatum Survey Sleds
- 1 x Innovatum Beach Rig

SUBMAGNETIX is the operational division of Innovatum Ltd., specialising in shallow water surveys of all types of submarine cables and pipelines. Using SMARTRAK and SMARTSEARCH systems carried by our own vehicles, we provide top quality data without the overhead of large survey operations.

We own a fleet of ROVs and towed sleds tailored towards shallow water work. Our vehicles are fitted with a complete suite of lightweight sensors, and thus only require small shallow draft vessels, which may operate from small harbours close to the offshore installations. The small ROV only requires a small crew, and the complete offshore operational team, including survey, is normally only three personnel for 12 hour working.

SUBMAGNETIX has the capability to provide all levels of service, tailored to the customer requirement, from a full survey including all planning, vessel chartering and reporting through to simply providing sensor systems and operational expertise.
